present during the whole year, and the numbers may vary greatly during the year.

p in the Boone County column for records from adjacent Platte County.

—S to indicate a species which remained after 30 June.

s in the NW Edge column to indicate a species recorded in Sheridan County but not in Dawes or Sioux counties.

W — to indicate a species which was reported as present before 1 January.

W-S indicates much the same thing as "P", but it is used in cases for which the pattern is not always true.

x instead of a date means the specific date in the month was not given; used in a column instead of "x" for no record it is a warning that the observations did not cover a complete season, and the lack of a record may be due to a lack of observations rather than the absence of the species.

* in the Washington Co. column for species also reported on 1 January but not again until the date shown.

Two dates indicate the first and last records for the location. The information is presented in a

Douglas, (and Sarpy), Omaha and Bellevue, 220 species, Paul Bedell, R.G. Cortelyou, Mrs. Tanya Bray, Mrs. Ruth Green, Babs and Loren Padelford, reporters, Hal Chase, Mary Denney, Dick Ferguson, Bill Fiske, Mike Haney, Carrie Humphrey, B.J. Rose, Alice Rushton, Andy Saunders, Phil Swanson. The Peregrine Falcon was seen near Schramm State Park by Paul Bedell, who reported: I had just begun looking for Piping Plover on the Platte River when my spotting scope revealed a raptor with a striking face pattern perched on a piece of driftwood on a large sandbar about 100+ yards away. After a few minutes it flew leisurely downriver, causing

May. Turkeys had just been reintroduced into the area.

Lancaster, Lincoln 160 species, Paul Bedell, James Ducey, Mrs. Ruth Green, Dr. Norma Johnson, Mrs. Mabel Ott, reporters. The Common Loon was on Oak Lake. Mr. Ducey commented that continued rains meant that a large amount of surface water was available in the wetland basins, and Mallard and Pintail numbers were high. But more water meant less mud flats, and shorebird diversity was down. The winter Snipe was coming to the feeder at Bob Manning's near Raymond. Dr. Johnson said Cedar Waxwings and Brown Creepers were

So much rain has meant high water and no sandy beaches, and made the meadows wetter than she wanted to drive on.

Nemaha, see SE Corner

NW Edge, northern Sioux, Dawes, Sheridan, and Cherry counties, 166 species, Babs and Loren Padelford, Mrs. Tanya Bray, reporters. This includes observations at the Annual Meeting (dated May 20 and 21) (*NBR* 50:26), by the Padelfords in late May (including Cherry and Sheridan counties), and by Mrs. Bray in late June. The Padelfords reported: The Greater Scaup was observed at Smith Lake. It was close to the shore when we first saw it. We observed it

after Ap 24, Red-bellied Woodpeckers after My 1 — all of these are normally permanent residents. The total absence of White-crowned, White-throated, Fox, and Lincoln's Sparrows is also unprecedented. There were two Common Loons present on My 30, both in winter plumage. The Solitaire is the fourth consecutive winter at this area. I had almost given up hope, when on 21 March I visited an area about 50 yards beyond my usual route, and there he was on top of a cedar. He might have been there all winter.

Sarpy, see Douglas.

Father Hoffman sent in this observation about the Piping Plovers at Morse Bluff: On 25 June and on 6 July I observed pairs of adult Piping Plovers with downy young (three in each case). The time lapse and the fact that the two observations were a considerable distance apart and separated by roads, weedy fields, and woodlands indicate to me two different broods. In both cases the birds were on tailings from sand-pit operations.
